1. Title of the Project

Bank Management System

2. Introduction

A **Bank Management System** is a software application designed to handle the daily activities of a bank in a faster and more organized way. In traditional banking, tasks like creating customer accounts, managing deposits and withdrawals, checking balances, and processing loans require a lot of manual work. This often leads to delays, errors, and difficulty in maintaining records.

This system helps the bank store all customer and account information in one place, so staff can easily access, update, and manage data. It makes banking operations quicker, reduces paperwork, improves accuracy, and increases security. With the help of this system, banks can provide better and more reliable services to their customers.

The project will be developed using :-

Core Java

JDBC for database connectivity

MySQL for data storage

Maven as the build and project management tool.

3. Objective

- To manage all banking data in one place.
- To reduce manual work and save time.
- To improve accuracy of customer and account data.
- To make data search and retrieval faster.
- To increase security of banking information.
- To provide quick and better customer service.
- To maintain clear records of all transactions.
- To connect all banking modules smoothly.
- To build a system that can grow in the future.

4. Project Category

This project falls under the category of **Application Software (Database Management System)**.

It is a Console-Based Banking System built using the following technologies :-

- Core Java for logic implementation
- JDBC (Java Database Connectivity) for connecting Java with MySQL
- MySQL Database for storing and managing all banking data
- Maven for project management and dependency handling

5. Analysis

5.1 Modules and Description

1. Customer Management Module

- Customer registration
- Customer profile update
- KYC upload & verification
- Customer status (active/inactive)
- Customer search

2. Account Management Module

- Open account (Savings/Current/FD)
- Close account
- View account details
- Change account type
- Balance check

3. Transaction Management Module

- Deposit
- Withdraw
- Fund Transfer
- Mini statement
- Full transaction history

4. Employee/Staff Management Module

- Add employee
- Update employee details
- Assign roles (Admin / Manager / Staff)
- Employee login credentials
- Salary & designation

5. Branch Management Module

- Add new branch
- Assign IFSC/Branch code
- Staff list per branch
- Customer list per branch

6. Loan Management Module

- Loan apply
- Loan eligibility check
- Loan approval/rejection
- EMI calculation
- Loan repayment status

7. Security & Authentication Module

- Login system (customer + employee)
- Password hashing
- Role-based access control
- Session management
- Activity logs (who logged in, when)
- Security alerts (simulated)

5.2 Database Design (Table Format)

1. customers

Columns	Type	Key/Constraints
customer_id	INT AUTO	PK
first_name	VARCHAR(50)	Not Null
dob	DATE	Not Null
gender	VARCHAR(10)	Not Null
phone	VARCHAR(15)	UNIQUE
email	VARCHAR(100)	UNIQUE
address	TEXT	Not Null
kyc_status	ENUM('Pending','Verified','Rejected')	Not Null
created_at	TIMESTAMP	Not Null
status	ENUM('Active','Inactive')	Not Null

2. accounts

Columns	Type	Key/Constraints
account_id	INT AUTO	PK
customer_id	INT	FK
branch_id	INT	FK
account_type	ENUM('Savings','Current','FD')	Not Null
balance	DECIMAL(15,2)	Not Null
opened_on	DATE	Not Null
status	ENUM('Active','Closed')	Not Null

3. transactions

Columns	Type	Key/Constraints
transaction_id	INT AUTO	PK
account_id	INT	FK
txn_type	ENUM('Deposit','Withdraw','Transfer')	Not Null
amount	DECIMAL(15,2)	Not Null
txn_date	TIMESTAMP	Not Null
reference_account	INT	FK
balance_after_txn	DECIMAL(15,2)	Not Null

4. employees

Columns	Type	Key/Constraints
---------	------	-----------------

employee_id	INT AUTO	FK
branch_id	INT	Not Null
first_name	VARCHAR(50)	Not Null
email	VARCHAR(50)	UNIQUE
phone	VARCHAR(100)	Not Null
role	ENUM('Admin','Manager','Staff')	Not Null
salary	DECIMAL(10,2)	Not Null
date_joined	DATE	Not Null
status	ENUM('Active','Inactive')	Not Null

5. branches

Columns	Type	Key/Constraints
branch_id	INT AUTO	PK
branch_name	VARCHAR(100)	Not Null
ifsc_code	VARCHAR(20)	UNIQUE
address	TEXT	Not Null
phone	VARCHAR((15)	Not Null

6. loans

Columns	Type	Key/Constraint s
loan_id	INT AUTO	PK
customer_id	INT	FK
loan_type	ENUM('Home','Personal','Vehicle')	Not Null
amount	DECIMAL(15,2)	Not Null
interest_rate	DECIMAL(15,2)	Not Null
tenure_months	INT	Not Null
emi_amount	DECIMAL(10,2)	Not Null
loan_status	ENUM('Pending','Approved','Rejected','Active','Completed')	Not Null
applied_on	DATE	Not Null
approved_on	DATE(nullable)	Not Null

7. loan_payments

Columns	Type	Key/Constraints
payment_id	INT AUTO	PK
loan_id	INT	FK
amount_paid	DECIMAL(10,2)	Not Null
payment_date	DATE	Not Null
remaining_amount	DECIMAL(15,2)	Not Null

8. users

Columns	Type	Key/Constraints
user_id	INT AUTO	PK
username	VARCHAR(50)	UNIQUE
password_hash	VARCHAR(255)	Not Null
role	ENUM('Customer','Employee','Admin')	Not Null
linked_customer_id	INT	FK
linked_employee_id	INT	FK
last_login	TIMESTAMP	Not Null

9. login_logs

Columns	Type	Key/Constraints
log_id	INT AUTO	PK
user_id	INT	FK
login_time	TIMESTAMP	Not Null
logout_time	TIMESTAMP	Not Null
status	ENUM('Success','Failed')	Not Null
ip_address	VARCHAR(50)	Not Null

Logout

7. Platform Used

Hardware Requirements

- Processor: Intel i5
- RAM: 16GB
- Storage: 1GB free

Software Requirements

- Windows
- JDK
- MySQL Server
- Maven

- IDE :- Eclipse

8. Future Scope

- The system can be expanded to support online banking.
- Mobile app versions can be added for easy customer access.
- Advanced security features like OTP and biometrics can be included.
- AI-based fraud detection can be added in the future.
- The system can connect with UPI and digital payment platforms.
- Automated loan approval using credit score analysis can be added.
- Real-time notification services (SMS/Email) can be included.
- More branches of the bank can be connected under one system.
- Cloud storage can be used for faster access and backup.
- New modules like insurance, cards, or investments can be added later.
